FRP 50 mm and 74 mm strips

These FRP anti slip strips have been designed to offer lasting slip resistance. They are made from a composite material that is suitable for use in harsh environments; including, high exposure to salt water. During the manufacture process silicon carbide is incorporated to form an inseparable gritted surface. The strips are available in two sizes. It is important to note that this is SOLID FRP ; it does not have a galvalised backing, which cause problems with delamination.

Strips are approximately 3mm thick and taper on both sides. They are available in black or yellow with a silicon carbide anti slip grit finish. The FRP 50 and 74 mm strips comply with Australian Standards AS1428.2021. These Anti Slip Strips have been slip resistance tested to AS 4586:2013

Application

These Anti Slip Strips can be used as a standalone stair edge slip protection strip or as a ramp slip protection.

The strips are available in hi vis yellow or black with a heavy duty silicon carbide anti slip grit for serious industrial and marine slip protection applications.

2 Year standard manufacturers warranty.
